Claim Rejections - 35 USC § 103

- 1. Claims 10-14, 21, 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamada et al. in view of Sahatjian and optionally further in view of Krasner.
- 2. Yamada already teaches mounting the deflated lens on the moveable member 28, moving the moveable member from a first position to a second position deploying the lens, forming the intraocular lens by injecting a medium into the lens and removing the moveable member from the lens and eye.
- Regarding the last line of the claim, it is recited that an injection device "may be" inserted into the intraocular lens to adjust the amount of optical medium in the intraocular lens. Since Yamada teaches that the gel filler 16 is self-sealing, an injection device is capable of being inserted into the intraocular lens to adjust the amount of optical medium and the gel filler 16 would seal around the injection device when inserted and seal when removed. Therefore it would appear Yamada teaches the last line limitation claimed.
- 4. The only difference between the claim and Yamada is the provision of an outer member in which to surround the moveable member 28 to protect the eye as well as the intraocular lens and moveable member while it is being inserted and removed from the eye. The new language appears to be merely describing the relative location of the moveable member within the outer member during insertion into the body and removal from the body.
- 5. Sahatjian teaches the conventional outer member 30 that contains and protects the inner inflatable moveable member during insertion into the body. It would have been obvious to one of ordinary skill in the art to modify Yamada to use a conventional separate outer sheath or tube

Application/Control Number: 09/904,201

around the inner inflatable moveable member as taught by Sahatjian to protect the human tissue and protect and guide the inflatable member to its destination.

- 6. To any extent it is felt that the last line of claim 10 somehow further limits the method, Krasner teaches column 3, lines 15-19, the method of inserting an injection device in an already implanted lens for adjusting the amount of fluid within the lens after it has already been inserted in place. The self sealing gel 16 of Yamada would allow the function of re-inserting an injection device into the intraocular lens to adjust the amount of medium in the lens. It would have been obvious to one of ordinary skill in the art to further modify Yamada to re-insert an injection device in the lens to adjust the fluid in the lens as taught by Krasner to modify the optical character
- 7. Claims 1-9 and 15-20 are allowable over prior art to which the examiner is aware.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Danton DeMille whose telephone number is (571) 272-4974. The examiner can normally be reached on M-Th from 8:30 to 6:00. The examiner can also be reached on alternate Fridays.
- 9. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Greg Huson, can be reached on (571) 272-4887. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
- 10. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR
